

European Geosciences Union General Assembly 2016 Soil System Science Division

17-22 April 2016 | Vienna, Austria

Soil in Cultural Landscape - The Future is in the Past: Insights from the Cultural Soil Archive sss3.5

Call for papers and posters

Soil is an excellent archive that documents and records the environmental landscape history. Today, the anthropogenic impact on the landscape is immense. Studying history through examination of the soil archive enables us to explore the long-term impact of ancient human activities. This enables us to build prediction models for a more sustainable future.

You are invited to submit abstracts to lecture on the subject described above. The lectures should present case studies and/or research that examine landscape history through the soil archive. We invite both field-based or modeling studies. Results and conclusions from these studies should allow for the construction of better landscape management models in the future.
